

SYSTEM FOR TIME SHIFTING LIVE STREAMED VIDEO-AUDIO
DISTRIBUTED VIA THE INTERNET

ABSTRACT OF THE DISCLOSURE

The invention is a system for time shifting live, streamed video and/or audio
5 distributed via a global computer network, e.g., the Internet. The invention is preferably
implemented as client-server software, with the possibility of both the client and the
server running on the same PC. Alternatively, the system software may be embedded
within a digital VCR information appliance, giving the system the ability to time shift
and display Internet content as well as broadcast video content received via cable or
10 satellite.
